7

d) Port B = 7 0x7 = 7 in hex

e) Port B = 32 = 20 hexidecimal

f) Port B = 0x45 = 45 hexidecimal

7b) Port B = 0xF0 & 0x56;

1111 0000
0101 0110
$\boxed{0101\ 0000_2}$ = 80

e) PortA = 0xF0 ^ 0x90;

1111 0000
1001 0000
$\boxed{0110\ 0000_2}$ = 96

h Port A = 0xF0 | 0x99

1111 0000
1001 1001
$\boxed{0110\ 1001_2 = 105}$

1010
1001 1010

9c Port B = 0x D4 >>3;

1101 0100

0001 1010 $\boxed{= 1A}$

d) Port B = 0x A7 << 2;

1010 0111

$\boxed{1001\ 1100}$ $\boxed{9D}$

23 Rom is non volatile. Memory stays when power is turned off.

24 The more code space you use for data. The less space you have for program code

Ch 8

#4) XTAL and EXTAL

#7) Background Debugger Mode

8) High , Low

9) FFFE

10) 0x00

15) Power on Reset, Clock Monitor Reset, Computer Operating Properly Reset, Hardware Reset, External Reset

16 EXTAL can be connected to external clock source
